

ALLOY ROTARY JOINT ASSEMBLY

Product Code: 42502

ALLOY ROTARY JOINT ASSEMBLY

This aluminium rotary swivel is used for air riveters inlet fittings, namely Lobster brand, but could be used for any other applications that require a compact swivel with 1/4" BSP threads on both sides.

Due to the fact that this swivel only has a 3.06mm bore it would not lend itself to be used on air tools that require a constant flow. It could be used for low flow applications. Maximum recommended pressure is 90 PSI.
