

CRT LOCK-ON, Truck Type-Core Removal Tool

Product Code: 97.5258

CRT LOCK-ON, Truck Type-Core Removal Tool

This is the Lock-On version (Truck Type) of the Core Removal Tool / Inflation / Deflation Tool (CRT) is designed to reduce inflation / deflation time by allowing the operator to remove the valve core safely during the process.

It does fit car and 4WD tyre valves, yet it has a more secure connection with the locking ring at the end that is pulled back to disengage, and pushed forward to engage the lock on the valve - it reduces the risk of accidental disconnection. Also called Euro Clip-on CRT002

Using the tool eliminates the risk of eye injuries from flying valve cores. The operation is simple. After removing the valve cap, the CRT is first clipped onto the valve stem. The CRT stem is then pushed in to engage the valve core. By rotating the stem anti-clockwise, the valve core can be removed without the risk of the extracted core escaping. The valve core is extracted into the CRT body, allowing the operator to view that the valve core is fully retracted. Upon completion of the inflation / deflation process, the valve core can be refitted into the valve stem by pushing the CRT stem forward and rotating it clockwise.

The CRT is available as a clip-on or lock-on type for the different applications.

For Clip-On type, see part# 97.5058
