FLOW RATE OIL (SAE30)	L/MIN	45	60	67	70

PUMP KIT

The Dragin Pump has been designed to recover liquids from machine tools, sumps, open pits, etc into a standard closed-head drum.

Powered by compressed air to generate a vacuum in the drum, the Dragin Pump is the fast, efficient and safe way to remove coolants, used oil, solvents, sludge, hydraulic oil, metal chips and other industrial wastes.

To ensure safe operation the Dragin Pump incorporates an automatic shut-off valve which operates when the drum is full. It has no moving parts and does not come into contact with the material being recovered, providing long life and low maintenance.

Simply screw the Dragin Pump and the suction hose into the drum, connect the air supply and you're away - QUICK and EASY!

Specifications

Standard Accessories

1 x Dragin pump unit, 1 x Compressed air on/off valve, Safety ShutOff Valve, 2 metres of 40mm suction hose, 1 x Rigid plastic wand, 1 x vacuum head, 1 x Crevice tool.
