

PRESSURE (Rollover) VALVE

Brand: **Krontec**

Product Code: **ROV-GA-150-10D**

PRESSURE (Rollover) VALVE

The NEW ROV-GA-150 acts as a bleed- and ventilation valve with an integrated pressure relief valve. The valve closes automatically in case the fuel tank is completely filled, the car gets rolled over or when centrifugal forces occur. Once the floating body closes the pressure relief valve opens at pressure $14\pm 5\text{kpa}$ (ca. 150mbar), used for Professional motorsport applications. Unique features of this rollover valve are a Metal Internal Ball and a Floating Internal Body providing un-paralleled durability and accuracy.

Features Dash 10 (-10) male thread on one side and M16x1.5 female thread on the other, making it easy to fit various applications, all you need is to fit the appropriate adaptors into each end to fit your varying applications, and we carry these adaptors in stock, plus a host of other sizes!

We also have available under Part# ROV-GA-150 which is bare (M16x1.5 female threads in each side), and you can fit a number of differing adaptors, see Related Products below, this means you have one rollover valve for your inventory saving expensive stocks or multiple rollover part number confusion, contact us for any further information.
