

RET-RING 1-1/2"DR (2-7/8"ID)

Product Code: **RR10020CG**

RET-RING 1-1/2"DR (2-7/8"ID)

1-1/2" DR X 2-7/8" (73.02mm) ID socket retaining ring with Crush Gauge provides a safe and secure way to retain sockets to your tool, it will tell you when to replace worn sockets!

This part number is suited to 1-1/2" drive tools and has a 73.02mm (2-7/8") inside diameter to fit the socket groove.

This product is invaluable from an operational point, and most importantly a safety point. This product is far safer than the original way sockets are "retained" on the tool. The old way was via a metal pin and o ring, which can have a tendency to cause operator injury when the o ring loses it's tensile strength and can permit the metal pin to come out under rotational force. This can then be a dangerous safety hazard - this polyurethane product eliminates this danger.

Many sizes available for a multitude of applications.
